NEW QUESTION: 1
Service Management is a set of specialised organisational capabilities for providing value to customers in the form of services". These specialised organisational capabilities include which of the following?
A. Markets and Customers
B. Applications and Infrastructure
C. Service Pipeline and Service Catalogue
D. Functions and Processes
Answer: D

NEW QUESTION: 2

Refer to the exhibit. The self-service Webex Teams bot is failing when many users attempt to interact with it at the same time. Drag and drop the code snippets from the left onto the correct item numbers on the right that match the missing sections in the exhibit to complete this code to handle this high-load situation.

Answer:
Explanation:

NEW QUESTION: 3
You have two servers named Server1 and Server2 that run Windows Server 2012.
Server1 has the DHCP Server server role installed. You need to create an IPv6 reservation for Server2.
Which two values should you obtain from Server2? (Each correct answer presents part of the solution.

Choose two.)
A. the DHCPv6 unique identifier
B. the DHCPv6 identity association ID
C. the hardware ID
D. the MAC address
E. the SMSBIOS GUID
Answer: A,B
Explanation:
http://technet.microsoft.com/en-us/library/jj590730.aspx
The Add-DhcpServerv6Reservation cmdlet reserves a specified IPv6 address for the client identified by the specified Dynamic Host Configuration Protocol (DHCP) v6 unique identifier (ID) (DUID) and identity association ID (IAID).

NEW QUESTION: 4

A. Option B
B. Option A
C. Option D
D. Option C
E. Option E
Answer: B,E
Explanation:
Without using any custom code, Search service application administrators, site collection administrators, and site owners can help searches respond to the intent of users by creating query rules. In a query rule, you specify conditions and correlated actions. When a query meets the conditions in a query rule, the search system performs the actions specified in the rule to improve the relevance of the search results, such as by narrowing results or changing the order in which results are displayed. For example, a query rule condition could be that a term in a query matches a particular term in a SharePoint term set, or that a query is frequently performed on a particular result source in a search system, such as videos. When the query rule condition is satisfied, a correlated action could be to show a specific item at the top of the search results.
You can configure query rules for one or more result sources, and you can specify the time period during which the query rule is active.
E: To make the query rule active during a particular time period, click Publishing, and then specify the period.
Reference: Manage query rules in SharePoint Server 2013
