Coming right into a locale of "burnout" for a homeschooling mother **Practice Test ISO-9001-CIA Pdf** or father, or remaining a home schooler, indicates that someplace even though from the treatment, we have neglected our strategies.

With the assist of GAQM practice demo, your goals to get the ISO-9001-CIA certification will be very easy to accomplish and 100% guaranteed.

NEW QUESTION: 1

DRAG DROP

You need to ensure that customer data is secured both in transit and at rest.

Which technologies should you recommend? To answer, drag the appropriate technology to the correct security requirement. Each technology may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Answer:

Explanation:

Explanation:

* Azure Rights Management service

Azure Rights Management service uses encryption, identity, and authorization policies to help secure your files and email, and it works across multiple devices-phones, tablets, and PCs. Information can be protected both within your organization and outside your organization because that protection remains with the data, even when it leaves your organization's boundaries.

* Transparent Data Encryption

Transparent Data Encryption (often abbreviated to TDE) is a technology employed by both Microsoft and Oracle to encrypt database files. TDE offers encryption at file level. TDE solves the problem of protecting data at rest, encrypting databases both on the hard drive and consequently on backup media.

* TLS/SSL

Transport Layer Security (TLS) and its predecessor, Secure Sockets Layer (SSL), are cryptographic protocols designed to provide communications security over a computer network. They use X.509 certificates and hence asymmetric cryptography to authenticate the counterparty with whom they are communicating, and to negotiate a symmetric key.

NEW QUESTION: 2

You plan to set up the automatic Workload Repository (AWR) baseline metric threshold for moving window baseline. Which action would you take before performing this task?

- A.** Decrease the expiration time for the baseline
- B.** Decrease the window size for the baseline
- C.** Compute the baseline statistics
- D.** Take an immediate AWR snapshot

Answer: C

NEW QUESTION: 3

Refer to the exhibit.

What is the result of the configuration?

- A.** The EtherChannels would form, but network loops would occur because the load-balancing methods do not match.
- B.** The EtherChannels would not form because the load-balancing method must match on the devices.
- C.** The EtherChannels would form and both devices would use the dst-ip load-balancing method because Switch1 is configured with EtherChannel mode active.
- D.** The EtherChannels would form and function properly even though the load-balancing and EtherChannel modes do not match.

Answer: D

Explanation:

An etherchannel will form if one end is active and the other is passive. The table below summarizes the results for LACP channel establishment based on the configuration of each side of a link:

LACP Channel Establishment

S1 S2 Established?

On	On	Yes	Active/Passive	Active	Yes	On/Active/Passive	Not Configured	No	On	Active	No
Passive/On	Passive	No									

Load balancing can only be configured globally. As a result, all channels (manually configured, PagP, or LACP) use the same load-balancing. This is true for the switch globally, although each switch involved in the etherchannel can have non matching parameters for load balancing.
