Answer: D

NEW QUESTION: 2

A channel within a computer system or network that is designed for the authorized transfer of information is identified as a(n)?

- A. Covert channel
- B. Closed channel
- C. Overt channel
- D. Opened channel

Answer: C

Explanation:

Explanation/Reference:

Explanation:

An overt channel is a path within a computer system or network that is designed for the authorized transfer of data. The opposite would be a covert channel which is an unauthorized path. A covert channel is a way for an entity to receive information in an unauthorized manner. It is an information flow that is not controlled by a security mechanism. This type of information path was not developed for communication; thus, the system does not properly protect this path, because the developers never envisioned information being passed in this way. Receiving information in this manner clearly violates the system's security policy.
